About Us

WILDLY NATIVE SUBURBIA, LLC

Wildly Native Suburbia is inspired by the growing movement to reimagine suburban landscapes as spaces for ecological recovery and native biodiversity. We combine up-to-date research with hands-on field expertise to help you better understand, manage, and restore the ecological function of your property. Our work focuses on identifying and managing invasive species while designing and supporting native plant communities that strengthen habitat, resilience, and long-term ecosystem health.

I hold a Master's of Science in Biology and Geographic Information Systems (GIS), with research focused on how invasive species have shaped the resilience of eastern ecosystems over time. My work examines how invasive plants alter biodiversity, structure, function, and the long-term health of plants and wildlife. I love plants, and I bring that passion into helping restore them where they belong.

I care deeply about making this work accessible and understand that every property is ecologically unique, with differences in shade, soil conditions, moisture, existing vegetation, disturbance history, and human use patterns. This means that no two sites function the same way, and no two restoration or design approaches should be identical.

Because every property is different, our services are structured into clear, modular components with flexible scope and pricing, so you can choose the level and type of support that feels right for you. Whether you're starting with a simple ecological assessment or ready for a full design and garden installation plan, the goal is to meet you where you are and help you move forward with confidence.

At the core of this work is making sure your time, energy, and investment actually leads to lasting results. By understanding your site first and building a plan around real conditions, we help ensure that what you plant will truly thrive, so you're not redoing the same space a few years down the line. Native plants have evolved to grow here, which means they're not meant to become another ongoing project, but a landscape that becomes easier, more stable, and more rewarding over time.

Just as importantly, this work puts real impact in your hands. By choosing to restore native plant communities on your property, you are supporting local ecosystems, creating habitat, and contributing to the health of the landscape around you. We're here to guide and implement the process, you're the one making the decision to create that change.

Grace K. Attea

FOUNDER & RESTORATION ECOLOGIST

A Flexible, Modular Approach

WILDLY NATIVE SUBURBIA, LLC

This pricing guide is designed to be modular and flexible because we recognize that every property owner has different goals, budgets, interests, and levels of involvement.

Over time, we've found that some clients enjoy having their hands in the dirt and being part of the process, they may simply want guidance on plant selection, layout, installation methods, or where to place plants for long-term success. Others prefer a more hands-off experience and would like the project managed from planning through installation.

For that reason, our services can be mixed and matched to fit your needs. Whether you are looking for consultation only, garden design support, plant sourcing, installation assistance, invasive species management, or a full-service project, we aim to create an approach that works for you.

Our goal is to help make our landscapes more ecologically functional, resilient, and connected through thoughtful native planting and restoration, while meeting people where they are.

Please email us to schedule an initial consultation. We would love to learn more about your goals and discuss how we can help bring your vision to life.

Our Services

WILDLY NATIVE SUBURBIA, LLC

Property Surveys

Basic: Starting at \$50.00

This service provides a foundational ecological understanding of your property and establishes a clear baseline of current site conditions. It clarifies how the landscape is functioning today and what that means for future decisions.

This assessment evaluates shade patterns and light availability, soil type and moisture conditions, vegetation structure, and overall ecological function. It also includes a basic inventory of existing plants, including native, non-native, and invasive species present on the site.

You will receive a written interpretation that translates field observations into ecological insight, explaining how the site is currently functioning and what is driving those conditions in clear, practical terms.

Advanced: Starting at \$125.00

This service provides a detailed ecological baseline for sites that are more complex or require a deeper level of analysis to support restoration, design, or long-term management planning.

The assessment includes evaluation of shade variability, soil characteristics including texture, pH, and moisture conditions, vegetation structure, and overall ecological function. It also includes a comprehensive invasive species inventory with mapping of density and spread patterns, along with a full listing of native and non-native species present on the site.

You will receive a synthesized written interpretation that integrates all observations into a clear ecological reading of the property, explaining how the system is functioning, why those patterns exist, and what they mean for future management decisions.

WILDLY NATIVE SUBURBIA, LLC

Invasive Species Management

Written Management Plan: Starting at \$150.00

This service provides a clear, step-by-step ecological strategy for managing invasive species present on your property. It is designed to make the process manageable, structured, and ecologically informed rather than reactive or overwhelming.

The plan includes which areas we recommend you target first, a sequence of actionable steps to reduce reinfestation risk, and practical, low-effort strategies that can be carried out independently over time. It is tailored to the conditions of your site and focuses on realistic progression rather than one-time eradication efforts. All information provided is backed by peer-reviewed scientific studies that will be cited and linked for you if you would like to read more.

You will also receive a forward-looking management framework outlining how the site should be cared for across multiple seasons and years. This includes seasonal task guidance, adaptive management recommendations, and direction on how natural succession can be supported to guide the landscape toward greater ecological stability.

This plan does not include labor, see below.

Written Management Plan + Labor: Starting at \$250.00

This service includes everything outlined in the Invasive Species Written Management Plan above, with full labor support.

We carry out the invasive species management work on-site for you according to the management plan. This ensures that removal is completed in a way that reduces reinfestation risk, protects desirable vegetation, and aligns with long-term restoration goals.

The focus is on executing the management plan accurately and strategically, while setting the site up for successful native plant recovery and ecological resilience over time.

WILDLY NATIVE SUBURBIA, LLC

Native Garden Design

Complete Native Garden Design Plan: Starting at \$150.00

This service provides a full ecological planting design tailored specifically to your site conditions and long-term goals for the landscape. It includes a complete square-foot by square-foot spatial layout of planting zones and structural layering, organized across groundcover, herbaceous, shrub, and canopy layers where appropriate.

The design is organized by plant communities rather than individual species, reflecting how native ecosystems naturally function, interact, and stabilize over time. It also incorporates seasonal dynamics, including how the landscape evolves through spring, summer, fall, and winter, with attention to bloom timing, color progression, and long-term ecological succession.

In addition to the design, you will receive clear guidance for the critical establishment period after planting, as well as a seasonal maintenance framework, outlining what should and should not be done throughout the year to maintain ecological integrity.

This service does not include plant material or installation labor. See next page.

Native Garden Installaion

Plant Sourcing & Procurement for Garden Design Plans: *Price TBD*

This service manages the selection and ordering of all recommended plant species in the correct quantities based on your approved design. Plants are either grown by us or sourced from appropriate native plant nurseries to ensure ecological suitability, availability, and healthy establishment. All plant material is delivered directly to you for installation. Below shows the general spectrum of pricing options. Seeds are the most budget-friendly option, followed by starter plugs, then a mix of plugs and mature plants, with all mature plants being the highest-cost route. The best choice depends on your budget and how established you would like your garden to look in Year 1.

Full Installation Coordination for Garden Design Plans: *Price TBD*

This service provides on-site oversight and execution of the planting installation process, including mulching. It includes layout marking based on the design plan, guidance or supervision during planting, and ensuring that spatial organization and ecological layering are implemented correctly.

The focus is on accurately translating the design into the landscape while maintaining ecological integrity, proper plant placement, and conditions that support long-term establishment and success.

Generally, a custom Garden Design Plan + Plant Sourcing & Procurement + Full Installation Coordination runs between \$9.00 and \$20.00 per square-foot depending on site conditions, invasive species present, prep work needed, and the quantity and maturity of plants installed.

WILDLY NATIVE SUBURBIA, LLC

Trees & Shrubs

Tree & Shrub Sourcing + Delivery Service:

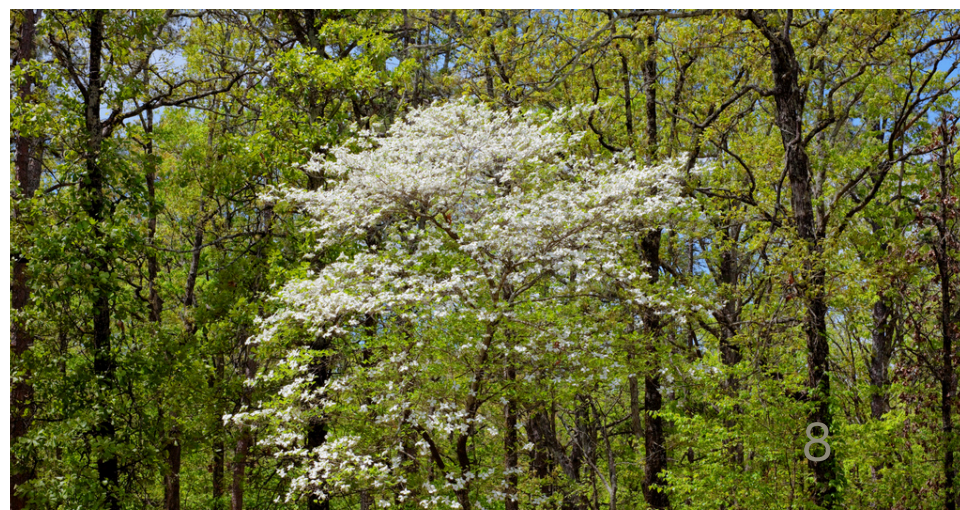

Cost of the Plants + 25%

This service provides the sourcing, procurement, and delivery of native trees and shrubs for clients who already have a planting plan or know what species they would like to install. If you are unsure what to plant, we are also happy to provide recommendations during the complimentary initial consultation based on your site conditions, goals, and desired level of privacy, wildlife value, maintenance, and aesthetics.

Plants are sourced from appropriate native plant nurseries and regional growers to ensure ecological suitability, strong root development, and successful establishment in Western New York conditions. This service includes coordinating availability, placing orders, and consolidating plant material from one or multiple nurseries when needed.

Once secured, all trees and shrubs are delivered directly to your property for client installation, or we are happy to do tree and shrub installations for an additional rate of \$35.00 per hour.

This option is ideal for homeowners, landscapers, or property managers who want access to high-quality native plant material without managing nursery coordination and logistics themselves.

WILDLY NATIVE SUBURBIA, LLC

Native Plant Sales

Native Plant Sales

We do native plant sales on a small scale throughout the growing season, with species availability varying year to year based on propagation success, seasonal conditions, and inventory.

Plants are selected with an emphasis on ecological value and suitability for Western New York landscapes. Availability may include native wildflowers, grasses, shrubs, and other regionally appropriate species.

Please email us to request a current availability list and pricing information. We are also happy to provide recommendations based on your site conditions and planting goals.

WILDLY NATIVE SUBURBIA, LLC

Aerial Wildlife Habitat Installation

Aerial Wildlife Habitat Installation (Bat Houses, Bird Houses & Canopy Mounting Systems): \$35/hour + cost of pulleys, cables, mounting hardware, and materials

This service provides installation of wildlife habitat structures in elevated locations using ladders, tree climbing techniques, and canopy-mounted pulley systems. Installations may include bat houses, bird houses, and other lightweight habitat features designed to support native wildlife while remaining accessible for long-term maintenance.

Pulley systems can be installed to allow habitat structures to be suspended from tree limbs or positioned high within the canopy while still being lowered and accessed safely from the ground for filling, seasonal cleaning, and maintenance.

This service includes evaluating appropriate installation locations, coordinating mounting methods that minimize damage to trees, installation of pulleys and hardware, and securing structures for long-term stability.

Clients may provide their own habitat structures, or we are happy to source bird houses and bat houses on your behalf for an additional materials cost.

Final pricing varies depending on site accessibility, complexity of mounting, and materials required.

Thank you for choosing Wildly Native Suburbia and for choosing to care for the wild spaces right outside your door. Every native plant added back to the landscape helps support habitat, biodiversity, and the health of our local ecosystems.
